Detecting the presence of the PRRAG3 DNA, or a variant is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may oc in exons 3, 4 or 10. In exon 3 variation may be a substitution a G for a C at nucleotide 320, resulting in the amino acid substitution of 17 for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the substitution of a T for a C at nucleotide 1037, resulting in the substitution of a T for a C at nucleotide 1037, resulting in the substitution of a T for a C at nucleotide 1037, resulting in the

                                                                                                                                                                                                          AAC98773 to AAC99231 encode the human pancreatic cancer associated CC proteins, called pancreatic cancer antigens, given in AAB54008 to CC AAB54466. The human pancreatic cancer antigens have cytostatic, CC neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, CC neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, CC in gene therapy. The polynucleotide and proteins can be used for CC preventing, treating, or ameliorating a medical condition or in assays CC for diagnosing a pathological condition or a susceptibility to one in a CC subject. Binding partners to the proteins and the activity of the CC proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. CC Agonists and antagonists to the antigens can be screened for. The CC pancreatic cancer antigen polynucleotides can be used to design nucleic analysis, tissue identification and/or typing and a variety of forensic can diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including CC and diagnostic methods. The proteins can be used to generate antibodies con be used to generate antibodies con the in vivo and in vitro diagnostic and therapeutic methods. The CC reproductive, gastrointestinal, pulmonary, cardiovascular, renal or CC proteins can be used to treat or prevent neural, immune system, muscular, ceprolect sused in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAC98774

AMPK polypeptides cabe used to identify compounds which regulate the action of kinases. Suc fragments can be used to reduce biosynthesis of cholesterol and fatty acids. They may also be used to inhibit the release of these molecules from intracellular stores by hormone sensitive lipase (HSL). They may also be used to reduce cellular malonyl CoA levels and promote the beta-oxidation of fatty acids by mitochondria. AMPK-alphal fragments could be used in the treatment of e.g. hypercholesterolaemia, hyperlipidaemia, obesity, clinical syndromes associated with hypoxia or ischaemia (e.g. myocardial infarction) disorders of nutrition and diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated 5'-AMP-activated protein kinase subunit(s) - us develop products for treating e.g. hyper-cholesterolaemia, o hypoxia, ischaemia, nutrition disorders or diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

alignments, and a consensus sequence was derived from the extended CC and overlapping Incyte clones 3075712/HEARNOTO1, 842220/PROSTUTO5, CC 1364747/SCORNONO2, 145972 and 145802/PRNITUTO1 and 1479332/CORNOTO2. CC DAPK-7 shows 73% homology with the human foetal liver AMPK gamma CC subunit (GI 1335856), and is associated with cDNA libraries which CC are immortalised or cancerous and show inflammatory or immune CC responses. The invention provides disease associated protein kinases CC DAPK-1 to DAPK-7 (see AAWB8412-38) and cDNA clones encoding them (see CC AAXO6331-36 and AAXO6682), as well as expression vectors, host cells, CC uses of such products in the diagnosis, prevention and treatment of CC disease associated with cell proliferation, especially cancer or an adult respiratory distress syndrome, allergies, asthma.

cc full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary cc to the complementary strand of a polynucleotide which comprises one of ct the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination cc of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination cc complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a cc polynucleotide which comprises a 3'-end sequence, where the cc oligonucleotide which comprises a 3'-end sequence, where the cc oligonucleotide comprises a 3'-end sequence, where the cc the 5'-end sequence/3'-end sequence is selected from those defined in cc the specification. The primers are useful for synthesising polynucleotides, cc particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by ct the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB13633 to AAH18742 represent human cDNA sequences; aAB92446 to CC AAB95893 represent human cDNA sequences; aAAB9246 to CC AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1167
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1467
                                                                                                                                                                                                                                               Claim

RESULT
AAH43684
                The sequences given in AAH43681-84 represents genomic fragments encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution P71A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation in intron 6.
                                                                                                                                                                             New variants of human AMP-activated protein kinase gamma3 subunit associated with a metabolic disease e.g. diabetes or obesity and for determining a risk estimate of diseases in subject by detectivariant.
                                                                                                                                                         Example 1;
                                                                                                                                                                                                                                                    Andersson
                                                                                                                                                                                                                                                                         (AREX-) AREXIS

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) CC amino acid sequences given in AAM62170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK64950 and AAM62169 crepresent sequences used in the exemplification of the present invention.
